TITLE: Some Special Features of Post-Magmatism in Western
Uzbekistan (Nekotoryye osobennosti postmagmatizma v
Zapadnom Uzbekistane)

PERIODICAL: Zap. Uzbekist. otd. Vses. mineralog. o-va, 1955, vol 8,
pp 45-71.

ABSTRACT: The granitic intrusions of western Uzbekistan are the
products of late Variscan magmatism. They were formed
in four successive phases of intrusion which gave rise,
respectively, to diorites, diorites and gabbro-diorites,
granodiorites and quartz diorites, and biotite granites
and alaskites. Each phase was accompanied by a dike
facies and possibly by post-magmatic mineralization.
The principal peculiarity of the post-magmatic effects
in western Uzbekistan is the dominance of skarn mineral-
ization over other types of post-magmatic activity.

Card 1/4

15-1957-3-2929

Some Special Features of Post-Magmatism in Western Uzbekistan

Skarns accompany almost all the intrusive masses and, in places,
form thick valuable deposits. The predominance of skarn min-
eralization is explained by the petrochemical features of the
magma, which developed by assimilation. The largest skarn
bodies occur at the contacts of granitic rocks, chiefly of the
second and third phases, with limestones. The skarns form both
in the limestones (alloskarns) and in the intrusive rocks them-
selves (authoskarns). The latter are generally separated from
the granitoidal rocks by a zone of desilicified pyroxene-plagio-
clase rocks. The authoskarns and alloskarns are markedly dif-
ferent in their chemical and mineralogical compositions. Calcite
is present in the alloskarns; feldspar, apatite, and sphene
occur in the authoskarns. The ratio Al:Si is high in the autho-
skarns. Other differences may also be found. Mineralogically,
more than ten types of skarns may be distinguished. The follow-
ing paragenetic associations are found among the minerals of the
skarns: 1) relict minerals; 2) minerals of the skarn stage; 3)
ore minerals of a high-temperature stage; 4) minerals of the
quartz-sulfide stage; and 5) minerals of the quartz-carbonate
stage. The alloskarns are chiefly hedenbergite. Garnet (gros- .

Some Special Features of Post-Magmatism in Western Uzbekistan

sularite) is widely developed in the authoskarns, having formed by replacement of plagioclase. Pyroxene, garnet-pyroxene, and quartz-pyroxene skarns are abundant at contacts between limestone and greatly eroded intrusives, where limestone forms the chief country rock. In areas where alumino-silicate rocks with smaller layers of limestone are the principal country rock garnet, garnet-vesuvianite, and wollastonite skarns are developed at the contacts between the limestones and the intrusive rocks. At the contacts of dolomitized limestones, skarns rich in magnesium minerals (forsterite, spinel, and serpentine) are formed. The skarn bodies of western Uzbekistan belong to at least three age groups, which are related to the multi-phase magmatic activity. Besides skarns, the following types of mineralization occur in the intrusions of western Uzbekistan: 1) pegmatites; 2) greisen and muscovite rocks; 3) albite and albite-chlorite rocks; 4) tourmaline and quartz-tourmaline rocks; 5) gilbertite-quartz and chlorite-quartz rocks with slight sulfide mineralization; 6) graphitized rocks; and 7) serpentinite and talc-chlorite rocks. Pegmatites are rather widely distributed and are chiefly related,

Magmatizm i postmagmatische protsessy v Zapadnom Uzbekistane (Magmatics and Postmagmatic Processes in Western Uzbekistan) Tashkent, Izd-vo AN Uzbekskoy SSR, 1958. 471 p. 1,000 copies printed.

Sponsoring Agency: Akademiya nauk Uzbekskoy SSR. Institut geologii.

Resp. Ed.: Kh. M. Abdullayev, Academician, Uzbek SSR Academy of Sciences; Ed. of Publishing House: P. I. Gor'kovoy; Tech. Ed.: Z. P. Gor'kovaya

PURPOSE: This work is intended for industrial geologists and mining engineers.

COVERAGE: The author describes the basic stages in the development of magmatic and postmagmatic mineralization phenomena in Western Uzbekistan, and the principal trends (regularities) in the distribution of endogenic mineral deposits in that region. Mineralization zones and loci are described, and the relationship between the recurrence of mineralization processes and the repetition of magmatic cycles and phases is demonstrated. The author

Card 1/9

"APPROVED FOR RELEASE (09/17/2001) CIA-RDP86-00513R000721720014-7"

concludes that there is a direct relationship between the high content of individual rare elements in magmatic formations and the concentration of these elements in postmagmatic deposits. The following persons assisted the author in compiling and processing the material presented in this book: A. Sh. Shamansurov, Sh. K. Rasulev, Sh. Sharakhmedov, A. K. Kasymov, V. P. Skvortsov, B. A. Kim, V. P. Smorodinova; P. L. Prikhid'ko of the Institut geologii AN UzSSR (Institute of Geology of the AS Uzbekskaya SSR); I. P. Tibukin and B. G. Lubyanskaya of the Uzgosgeolupravleniye (Uzbekskaya State Geological Administration); and Ye. Kalmykova of the Sredaztsvetmetrazvedka Trust. L. A. Voronova, I. D. Bespalova, A. S. Dudykina of the IGEM i GEOKhI AN SSSR and M. N. Golubchina of the VSEGEI (All-Union Geological Scientific Research Institute) contributed by performing spectral, x-ray spectral, and isotope analytical testing. During the past several years the author obtained assistance in the course of his studies from Academician Kh. M. Abdullayev of the AN UzSSR and geologists, Professor A. V. Korolev, V. I. Popov, and Candidates of Technical Sciences A. B. Batalov, R. A. Musin, K. L. Babayev, I. M. Isamukhamedov, V. G. Gar'kovets, and particularly Academician D. S. Korzhinskiy. Likewise the author obtained advice in connection with the present work by A. A. Saukov, Corresponding Member of the AN SSSR,

TITLE: The Second All-Union Petrographic Conference (Vtoroye
vsesoyuznoye petrograficheskoye soveshchaniye)

PERIODICAL: Izvestiya Akademii nauk, SSSR, Seriya geologicheskaya,
1958, Nr 10, pp 124 - 128 (USSR)

ABSTRACT: The above-mentioned conference took place in Tashkent from
19 to 23 May 1958. Over 1,000 representatives of over 100
geological organizations and vuzes took part in the con-
ference. Scientists from China, Poland, East Germany,
Rumania and Bulgaria also attended. The conference was
opened by the president of the AS of the UzbekSSR Kh.M.
Abdullayev. The Minister of Geology and Conservation of
Mineral Resources of USSR P.Ya. Antropov reported on the
extent of knowledge of the territory of the USSR, and on
problems of petrology. Lectures were given at plenary
sessions by Academician S.T. Dmitrov (Bulgaria), K. Smu-
likowski (Poland), Prof. Kautsh (E.Germany), Academician
D.S. Korzhinskiy, Corresponding Members G.D. Afanas'yev,
Yu.A. Kuznetsov, N.A. Yeliseyev and others. The majority
of lectures and reports were concerned with the definition
of regularities of manifestation of magmatism in various
regions of the Union, and peculiarities of their metalloc-
geny. Yu.A. Kuznetsov and Yu.M. Sheynman reported on

Card 1/3

SOV-11-58-10-12/12

general questions in the development of magmatism. The problem of genetic connection of endogenous mineralization with magmatism was the theme of many reports, among them a collective report by the scientific collaborators of the Institute of Geology of Ore Deposits, Petrography, Mineralogy and Geochemistry of the AS USSR V.S. Koptev-Dvornikov, O.S. Polkaya, M.G. Rub, I.Ye. Smorchkov and F.K. Shipulin and also the reports by Ye.A. Radkevich, I.G. Magak'yan and S.S. Mkrtchyan (Institute of Geology of the AS of Armenian SSR) and by M.P. Materikov (VIMS). G.S. Dzotsenidze, M.A. Kashkay, Sh.A. Azizbekov, M.A. Favorskaya and A.M. Kalik reported on the problem of the correlation of ore-bearing with effusive formations. A.P. Lebedev and G.G. Moor reported on the magmatic formations of the plateau regions. O.A. Vorob'yeva, V.K. Monich and G.P. Bagdasaryan reported on peculiarities of manifestations of alkaline magmatism in certain regions. The physico-chemical trend in the study of magmatic and post-magmatic formations was represented in reports by D.S. Korzhinskiy, V.A. Maslennikov and I.G. Govorov. The problem of genezis, the distribution of metamorphic rocks and their classification were the themes of reports by the Ukrainian geo-

ologists N.P. Semenenko, Ya.N. Belevtsev and S.P. Rodionov.-B.V. Zalesskiy, B.P. Belikov and Yu.A. Rozanov reported on physical, chemical and mechanical properties of rocks and on methods of their study. N.I. Khitarov reported on "Problems of Petrogenesis in the Light of Experimental Data", and G.D. Afanas'yev reported on "Some Data on the State of the Study of the Absolute Age of Rocks and Their Geological Importance". Finally a resolution was adopted in which the conference, after having enumerated the achievements of Soviet petrographers, complained about the shortage of laboratories for petrographers and stressed the importance of the further study of magmatic processes.

Group 2 included reports on endogenous deposits in other synclinal regions, such as mercury formations in Siberia and the Far East (V. A. Kuznetsov), pyrite deposits in the Ural (S. N. Ivanov), Kimeridgian and Alpine metallogeny in Uzbekistan (I. Kh. Khamrabayev); ore region types in the Pacific area (Ye. A. Radkevich); metallogeny in Tadzhikistan (K. I. Litvinenko); hydrothermally transformed rocks in the Trans-Carpathian region (M. Yu. Fishkin) peculiarities in magmatism and metallogeny of the Mountaneous Crimea (V. I. Lebedinskiy), antimony-mercury fields (M. A. Karasik) and others. Group 3 included reports on the classification of metallogenic zones and provinces of the Earth crust (D. I. Gorzhavskiy); classification of metallogenic zone types of the Earth crust (V. N. Kozerenko); classification of magmatogenous non-metallic mineral resources as a basis of prognoses and prospecting (V. P. Petrov); types of metallogenic provinces in synclinal regions of the USSR (A. I. Semenov); principles of geological zoning on the example of Central Asia (K. L. Babayev); comparative characteristics of metallogeny in Malyj Caucasus and the Kamchatka-Koryak zone (I. G. Magak'yan), some particularities of metallogeny in the Mediterranean geosynclinal region (G. A. Tvalchrelidze); rootless plutons and some peculiarities in the magmatism of moving zones (A. P. Lebedev); paragenetic ore complexes (P. S. Saakyan) the part of deep-lying breaks in metallogeny of syncline regions on the example of the Caucasus (E. Sh. Shikhali-beyli). The closing report was read by A. V. Sidorenko, Minister of Geology and Preservation of Mineral Resources of the USSR.

Title : The Change of the Amount of Copper in the Blood of
Animals in Stimulation and Inhibition of Central Nervous
System.

Orig Pub : Tr. Uzb. un-ta, 1957, vyp. 67, 85-91

Abstract : The influence of a conditioned defensive reflex (conditioned signal - metronome, unconditioned reinforcement-strong induction current) and of external inhibition (electric bell) on the content of Cu in the venous blood of two dogs was studied. Before application of the indicated influences, under conditions of rest, the Cu content in the

blood of the animals was 76-80 gamma%. The application of conditioned and unconditioned stimuli induced a sharp increase of Cu concentration (up to 172.5 gamma%) with the maximum on the 20th minute and a gradual decrease toward initial values towards the 40th minute. In application of an inhibitory stimulus at the time of realization of conditioned reaction, a conditioned-reflex increase in the content of Cu was not noted. -- B.M. Gekht

(Soil conditioners) (Clay)

KHAMRAYEV, S.S.; ARIPOV, E.A.; AKHMEDOV, K.S.

Swelling of Sierozem (Grey desert soil) treated by artificial
soil aggregation agents. Uzb.khim.zhur. 6 no.6:11-17 '62.

1. Institut khimii AN UzSSR. (MIRA 16:2)
(Soil stabilisation)

ARIPOV, E.A.; KHAMRAYEV, S.S.; BAKIYEVA, M.B.; ARTYKBAYEVA, Kh.Yu.;
AKHMEDOV, K.S.

Effect of the artificial soil aggregation agent K-4 on gray
desert soils having different degrees of dispersity. Uzb.
khim. zhur. 7 no.4:35-40 '63. (MIRA 16:10)

1. Institut khimii AN UzSSR.

KHAMRAYEV, S.S.; ARIPOV, E.A.; AKHMEDOV, K.S.

Aggregation in solutions of the hydrolysis products of polyacrylonitrile.
Koll. zhur. 25 no. 6: 716-717 N-D '63. (MIRA 17:1)

1. Institut khimii AN UzSSR, laboratoriya kolloidnoy khimii, Tashkent.

KHAMRAYEV, S.S.; ARIPOV, E.A.; AKHMEDOV, K.S.

Electron microscope study of soil aggregation under the effect
of polymeric preparations. Khim. i fiz.-khim. prirod. i sint.
polim. no.1:226-230 '62
(MIRA 18:1)
